Overlapping topics between different subjects and different semesters (within the same subject) should be replaced with new topics. Marks given for attendance should not hold the student back from attending lab classes, as sometimes there is a genuine emergency or need to skip class.

Apart from academics students need to improve and inculcate skills and passion for their career. I'm sure college is the best place to make them prioritise both career and passion. But lecturers from every stream have to encourage each and every student without any bias.

Importance should be given to teaching programming languages like R, python etc which are much more useful in finding jobs and in higher studies in the present time compared to languages like C and Java. Also importance should be given to teach topics to prepare students to find jobs based on statistics and not just computer science. Topics related to data science should be introduced.
