

ACTIVITIES 2019-2020

PSCIFE CLUB

The Physical Science Faculty have started a club in the academic year 2010-11 by the name PSCIFE (Physical Science Club for Information, Fun and Education). The main objectives of the club are: To have better inter- departmental interaction for both students and staff. To conduct activities like paper presentation, poster presentation, quiz, fun games, Brain quest, etc. To encourage their analytical skills and to stimulate their thinking and develop confidence. To make the students more creative. The Student Coordinator for the year 2019-20 is K.Malavika and Sub-Coordinator is K.Niharika from B.Sc MSCs 3A.

The events conducted for the year 2019-20(June-October) are

WORK WITH YOUR BRAINS

“Work with your brains” is the first event of the academic year 2019-20. This event is a welcome event and an exclusive event only for freshers. The event consists of a bit of in formalism with touch of the subjects. The game consisted of 3 rounds. 28 teams have participated in the event. As a part of first round the participants will be given a 10X10 grid in which they fill terms based on Maths, Computer Science, Physics, Electronics and Statistics respectively. They will be filtered based on their participation for the next round. In the second round they have to solve basic algebraic equations and look for the accurate answer. As a part of the third round which is informal, participants have to separate the water balls from water. The participants who separated the maximum are the winners. The winners of this event are Hiba and Sindhoori.

BRAIN TEASER

This event was conducted 3rd of August on Bhavanostav participating over 40 pairs. This game is all about fun and learning.

It's a small size tambola. This event consists of 2 rounds where in 1st round it all depends on your luck. The hosts have given a paper with a grid and some 40 science words. Words are to be filled in the grid given which consists of 25 boxes with a time limit of 5 minutes.

The rules of the game are:

1. No word should be repeated.
2. No over writing.

If so paper and participants are disqualified.

After that, hosts pick up the chits in the bowl and participants have to cut each word which matches the picked chit word. Participants whose grid fill are qualified for second round.

Round 2 is about word puzzle and they have given a grid and about 25 words in a pouch and they must arrange the words according to subject wise.

Participants whose grid is correct with all the words subject wise are winners.

CONNECTIVITY

This is another event which was connected as a part of Bhavanothsav2019. It is fun based game but with a crisp of technical words. In this game participants will be shown some pictures from which they have to guess the word hidden in the picture. The game consisted of 3 rounds. As the level in the game increased the harder it is to guess the words. The words are connected to the physical science subjects. The main idea behind this game was to increase the thinking skills in the students so that they can connect between the words and pictures. They had to think out of the box to win the competition. The ability of thinking and connecting makes them winners. Creative thinks also played a key role in this game. Also, they had to cop up with the time because a time limit was set for them to guess the words. They had to think and answer within the given time limit. Both the participants and the audience had a great time during the event while guessing the words and there was a great curiosity in the audience to know the correct words. A preliminary round was also conducted to qualify to participate in this event. The preliminary round was a basic general knowledge quiz. A questionnaire was given to everyone who participated with 30 basic general knowledge questions and the more you answer correctly will get you the chance to participate in the actual event.

TEST YOUR FRIENDSHIP

The Pscife club has come up with its new event i.e. Test your friendship. This event was open for all the streams of U.G. It was a pair event and 35 teams participated and the very interesting thing was not only the physical sciences students but also the other streams students have participated in large number. This event was held to test the coordination and bond between two friends. There were 3 rounds. The first round was about a set of questions which were given to both the friends to answer about each other. The participants were selected for next round on bases of number of questions they correctly answered about their friend. Then the second round was about to test the coordination between 2 friends. In this we kept a balloon between them, and they have to cover a certain distance without dropping it. Then the last round was about to test their compatibility. In this one friend with headset in which songs were playing should guess the word the other friend saying. It was very interesting and fun event. At the end all the students were Happy to get more close to their Friends
